SUMMARY

Software Engineer with 6 years of experience designing, scaling, and operating backend systems in Kotlin, Java, and Rust. Skilled in resilient architectures, high-load services, and leading cross-team technical initiatives. Focused on reliability, performance, and delivering production-ready solutions with measurable impact.

PROFESSIONAL EXPERIENCE

Software Engineer · Zalando

Aug 2024 — Present · 1y 10m

Full-time · Berlin, Germany

- Cross-Domain Leadership:** Led end-to-end technical design within Zalando's logistics and fulfillment domain, coordinating a complex customer-facing delivery initiative across 4 departments and 7 teams.
- Architecture:** Redesigned a critical distributed component by replacing a standalone service with a shared library, eliminating network dependencies, reducing operational risk, and lowering cloud costs.
- Delivery Ownership:** Owned backend delivery for 15+ customer-facing features across multiple teams, unblocking dependencies and ensuring production-ready rollout with Kotlin, Spring Boot, AWS, and Kafka.
- Operational Excellence:** Chaired department-wide operational reviews, raising standards for incident analysis, alerting, and remediation.
- Community & Standards:** Led Kotlin engineering standards initiatives across the company, facilitating working sessions, shaping shared practices, and mentoring engineers on implementation quality.

Software Engineer · Tinkoff Bank

Nov 2021 — Jul 2024 · 2y 9m

Full-time · Almaty, Kazakhstan

- Transaction Systems:** Engineered high-reliability transaction validation services in the financial payments domain in a high-load production environment using Rust, Kubernetes, and gRPC.
- Resilience:** Designed and launched a Stand-In Processing backup system, reducing downtime and ensuring uninterrupted transaction flow during system outages.
- Performance:** Improved database query efficiency and microservice throughput via targeted query optimisation and performance tuning.
- Site Reliability Engineering:** Owned production operations for transaction services, including deployments, incident response, root-cause analysis, and post-mortem follow-through.

Junior Software Engineer · Huawei Technologies

Mar 2020 — Oct 2021 · 1y 8m

Full-time · Saint Petersburg, Russia

- Big Data Platform & Performance:** Designed and delivered a company-wide Big Data pipeline configuration platform, improving system performance by 1.5x and reducing manual configuration effort by 5x with Java, PostgreSQL, and graph databases.
- Low-Code Data Platform:** Built a low-code platform for dynamic data aggregation and endpoint generation across multiple databases and streaming sources.

EDUCATION

Master's in Computer Science · ITMO University

Sep 2021 – Jun 2023

Programming and Artificial Intelligence · Saint Petersburg, Russia

Bachelor's in Computer Science · ITMO University

Sep 2017 – Jun 2021

Applied Mathematics and Informatics · Saint Petersburg, Russia
