SUMMARY

Senior Software Engineer with 6 years of experience owning backend systems across logistics, fulfillment, payments, and data-platform domains. Strong in distributed-system design, production reliability, performance, and cross-team technical delivery. Experienced in taking initiatives from architecture and trade-off definition through rollout, operational ownership, and measurable system improvements.

PROFESSIONAL EXPERIENCE

Software Engineer · Zalando

Aug 2024 – Present · 1y 11m

Full-time · Berlin, Germany

- Technical Leadership:** Owned architecture and cross-team execution for a customer-facing initiative in Zalando's logistics and fulfillment domain, aligning system design, dependencies, rollout strategy, and delivery risks across 4 departments and 7 teams.
- Architecture:** Drove the redesign of a critical distributed component by replacing a standalone service with a shared library, eliminating network dependencies, reducing operational risk, and lowering cloud costs.
- System Ownership:** Owned backend delivery for 15+ customer-facing capabilities across multiple teams, driving API design, dependency management, production readiness, and rollout quality with Kotlin, Spring Boot, AWS, and Kafka.
- Operational Excellence:** Chaired department-wide operational reviews to improve incident analysis quality and alerting discipline. Managed department-level technical risk tracking and introduced targeted backend observability metrics to enhance system resilience.
- Engineering Standards:** Led company-wide Kotlin engineering standards initiatives, facilitating technical working sessions, shaping shared practices, and mentoring engineers on implementation quality and maintainability.

Software Engineer · Tinkoff Bank

Nov 2021 – Jul 2024 · 2y 9m

Full-time · Almaty, Kazakhstan

- Payments Platform:** Owned backend engineering for high-load transaction validation services in the financial payments domain, using Rust, Kubernetes, and gRPC to support correctness, latency, and production resilience requirements.
- Resilience:** Designed and launched a Stand-In Processing backup system, preserving transaction continuity during upstream or internal service outages and reducing downtime impact.
- Performance:** Improved database query efficiency and microservice throughput through profiling, query optimisation, and service-level performance tuning.
- Production Ownership:** Owned production operations for transaction services, including deployments, incident response, root-cause analysis, post-mortems, and reliability follow-through.

Junior Software Engineer · Huawei Technologies

Mar 2020 – Oct 2021 · 1y 8m

Full-time · Saint Petersburg, Russia

- Big Data Platform & Performance:** Designed and delivered a company-wide Big Data pipeline configuration platform, improving system performance by 1.5x and reducing manual configuration effort by 5x with Java, PostgreSQL, and graph databases.
- Low-Code Data Platform:** Built a platform for dynamic data aggregation and endpoint generation across multiple databases and streaming sources, reducing repetitive backend implementation work.

EDUCATION

Master's in Computer Science · ITMO University

Sep 2021 – Jun 2023

Programming and Artificial Intelligence · Saint Petersburg, Russia

Bachelor's in Computer Science · ITMO University

Sep 2017 – Jun 2021

Applied Mathematics and Informatics · Saint Petersburg, Russia
