Professional Experience

Software Engineer | Zalando

Full-time · Berlin, Germany

Aug 2024 – present (1y 8m)

Fulfillment Offering Team

- **Cross-Domain Leadership:** Led end-to-end technical design of a complex customer-facing delivery initiative across 4 departments and 7 teams, translating ambiguous product goals into execution-ready plans
- **Architecture:** Redesigned a critical distributed component by replacing a standalone service with a shared library, eliminating network dependencies, reducing operational risk, and lowering cloud costs
- **Backend Delivery & Cross-Team Alignment:** Delivered backend services supporting 15+ customer-facing features across multiple teams, unblocking dependencies and ensuring timely rollout (Kotlin, Spring Boot, AWS, Kafka)
- **Operational Excellence:** Chaired department-wide operational reviews, raising standards for incident analysis, alerting, and remediation
- **Community & Standards:** Led company-wide engineering initiatives for Kotlin best practices, chairing working sessions, shaping cross-team standards, and mentoring engineers

Software Engineer | Tinkoff Bank

Full-time · Almaty, Kazakhstan

Nov 2021 – Jul 2024 (2y 9m)

Transaction Processing Team

- **Transaction Systems:** Engineered high-reliability financial transaction validation services in a high-load production environment (Rust, Kubernetes, and gRPC)
- **Resilience:** Designed and launched a Stand-In Processing backup system, reducing downtime and ensuring uninterrupted transaction flow during system outages
- **Performance:** Improved database query efficiency and microservice throughput via targeted query optimisation and performance tuning
- **Site Reliability Engineering:** Deployed services, resolved production incidents, and led post-mortems to strengthen platform resilience

Junior Software Engineer | Huawei Technologies

Full-time · Saint Petersburg, Russia

Mar 2020 – Oct 2021 (1y 8m)

Cloud Application Platform

- **Big Data Platform & Performance:** Designed and delivered a company-wide Big Data pipeline configuration platform, improving system performance by 1.5x and reducing manual configuration effort by 5x (Java, PostgreSQL, graph databases)
- **Low-Code Data Platform:** Built a low-code platform for dynamic data aggregation and endpoint generation across multiple databases and streaming sources
- **Mentorship:** Mentored two interns, improving onboarding and development practices

Education

Master's in Computer Science | ITMO University

Programming and Artificial Intelligence · Saint Petersburg, Russia

Sep 2021 – Jun 2023

Bachelor's in Computer Science | ITMO University

Applied Mathematics and Informatics · Saint Petersburg, Russia

Sep 2017 – Jun 2021

Conferences

Genetic and Evolutionary Computation Conference

Empirical Analysis of Crossover-Based Evolutionary Algorithms on Rugged Landscape

Jul 2023

Foundations of Genetic Algorithms Conference

Analysis of Crossover-Based Algorithms on RealJump Functions

Sep 2021

Summary

Software Engineer with 6 years of experience designing and scaling backend systems in Kotlin, Java, and Rust. Skilled in resilient architectures, high-load services, and leading cross-team technical initiatives. Focused on reliability, performance, and delivering production-ready solutions with measurable impact.

Skills

Development	Kotlin, Java, Rust, Spring Boot, REST API, gRPC, Gradle
Technologies	PostgreSQL, Kafka, AWS, Docker, Kubernetes, Git
Practices	CI/CD, Site Reliability, Shadow Testing, Cross-Team Rollouts
Soft Skills	Problem-solving, Adaptability, Teamwork, Mentorship, Initiative, Attention to Detail, Continuous Learning
Languages	English (proficient), German (intermediate), Swedish (elementary)
